About UBX and Veeam

UBX is a cloud services provider, deeply rooted in cloud and data center management. Our longstanding partnership with Veeam began in its early days, driven by a shared vision of innovation in data protection.

Industry Challenges

In today's landscape, ransomware poses a severe threat. These malicious factors are driven by profit, often at the expense of business operations and customer data access. Data protection has become a battlefield where staying one step ahead is paramount.

Introducing Veeam-in-a-Box™

Veeam and UBX: The Ultimate Data Protection Solution.

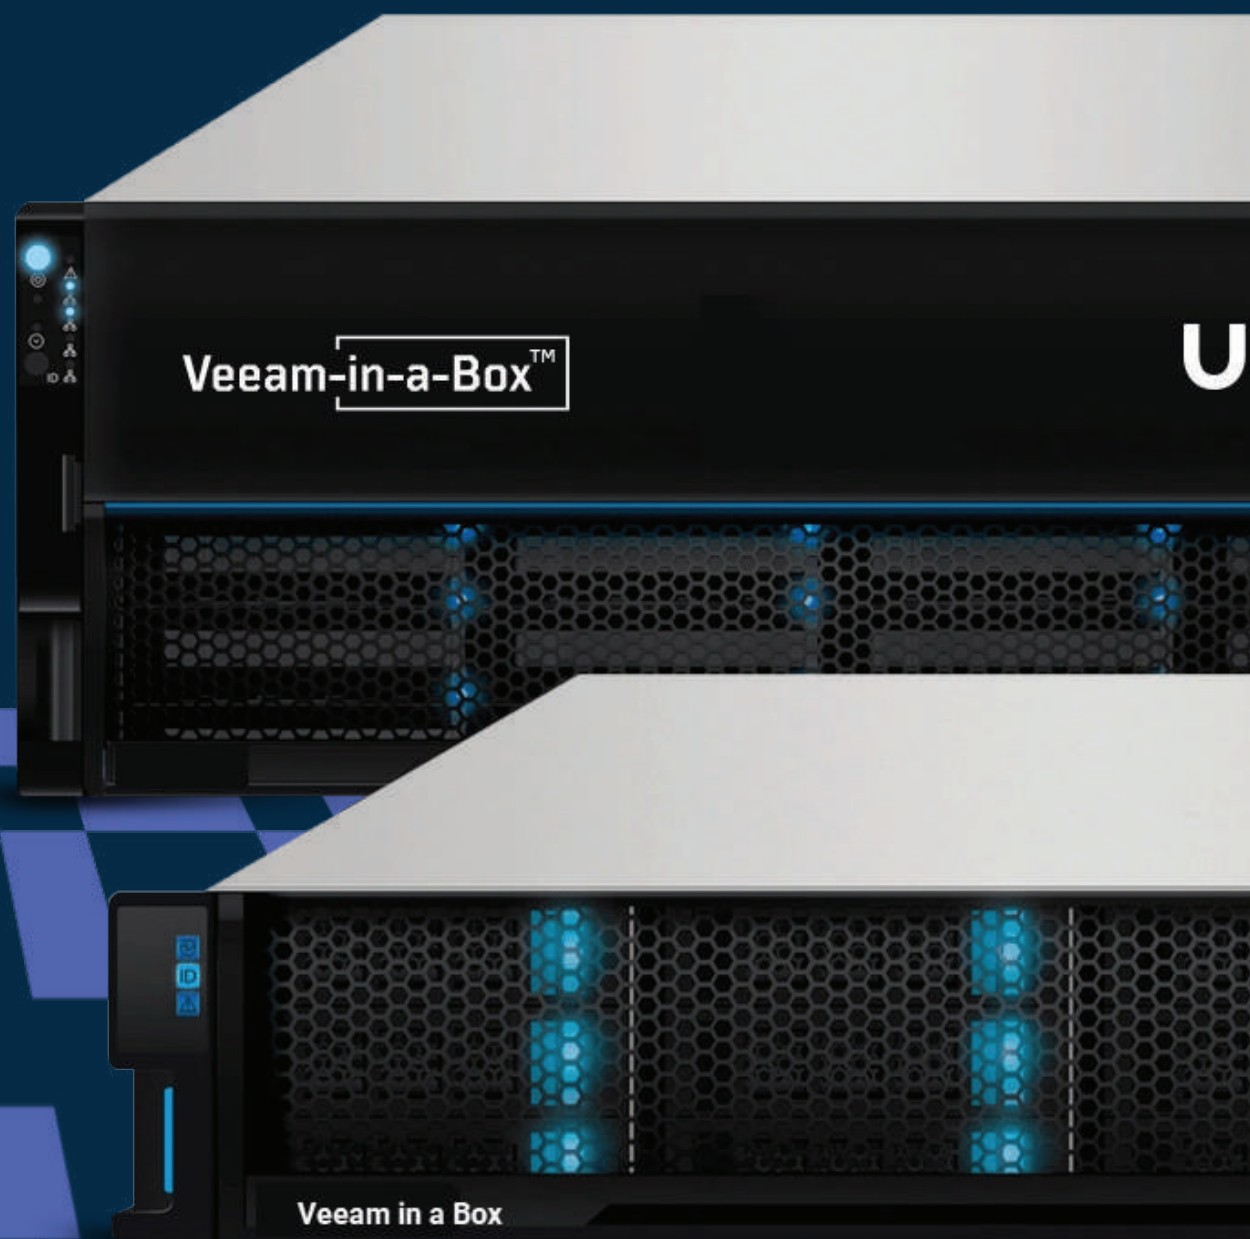

Our product is a simple, deployable physical appliance designed to safeguard every type of workload on-premises, in public or private clouds, colocations, end-user devices, and even SaaS platforms like Office 365 and Salesforce.

It's a comprehensive solution that includes hardware, licensing, and expert support, simplifying your data protection needs.

Why We're Doing It

We're on a mission because we believe existing solutions are incomplete. Data is the lifeblood of businesses today, and its loss can be catastrophic. Criminals capitalize on this vulnerability, demanding ransoms to restore access to vital data.

Our aim is to provide a complete, secure, and cost-effective solution that ensures your data is always safe.

Veeam-in-a-Box™ Product Benefits

- A

Protects ALL Workloads: Whether public, private, colocation, on-premises, or SaaS, our solution has you covered.
- B

Complete Coverage: Our service includes all required components-licenses, upgrades, maintenance, and expert support.
- C

Immutable Storage: Our hardware is highly secure, with a minimal surface area of attack.
- D

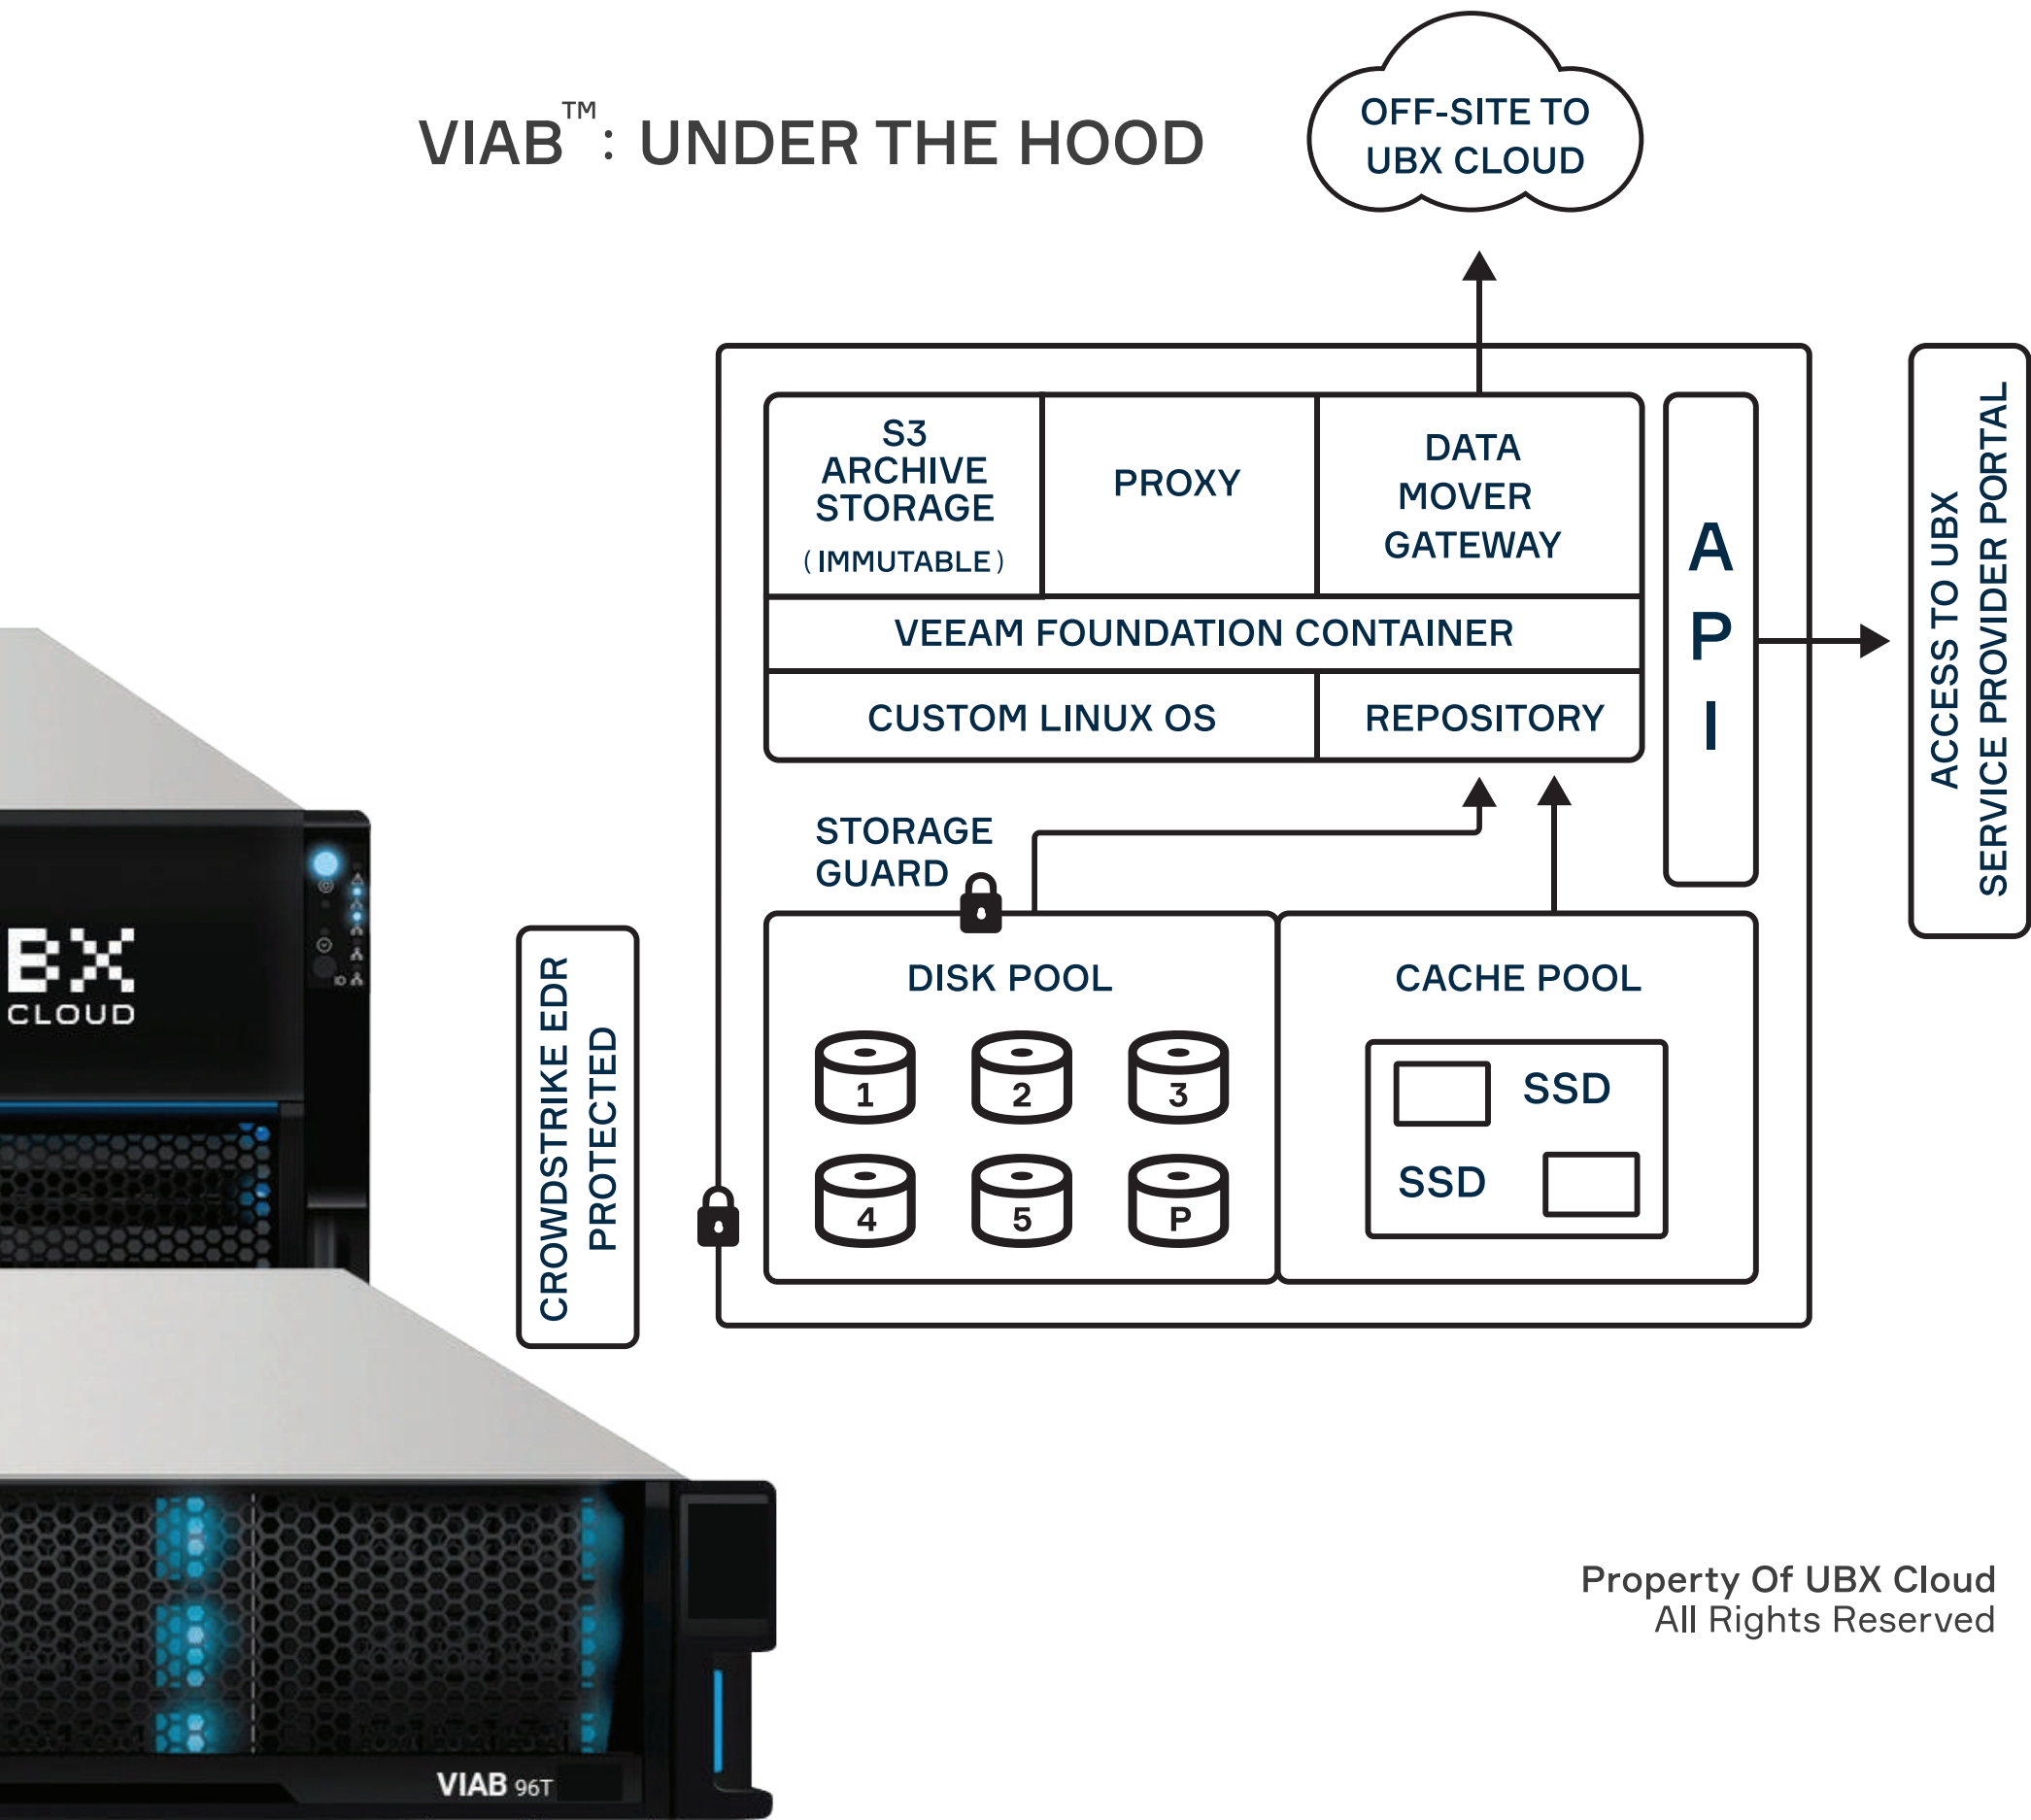

Zero CapEX: No capital expenditure required.
- E

Scalable Options: Right-sized appliances that grow with your needs.
- F

Global Deployment: Our physical and virtual appliances are deployable anywhere on the planet.
- G

Cloud Data Protection Included: Comprehensive data coverage for all your needs.
